

Research - Healthcare 02.10.2016 Update

The challenges of reform-era healthcare present a broad span of research subjects for our team at Dewar Sloan. Our history of Healthcare Sector Research tracks with changes in technology, clinical standards, economics, market behaviors and a host of value-related concerns. Our Healthcare Sector Research focus for the 2016-2018 horizon includes the following themes:

- ***Service Line Planning and Category Strategy***

Common challenges and objectives that shape effective service line development and management across organizations.

- ***Healthcare System and Subsidiary Board Practice***

General practices and emerging leadership themes for boards of hospitals, health systems and provider organizations.

- ***Strategic Collaboration Across Health Systems***

Emerging concepts for value-driven collaboration in healthcare, with special attention to structural and cultural considerations.

We hold general briefings on these important research priorities from time to time. Some content is released in articles and healthcare presentations. For more information, or for questions on the scope and applications of these research subjects, contact dboomer@dewarsloan.com.

Our extended research team includes healthcare executives, governance leaders, content and subject matter experts, consultants, technical and clinical leaders, journal editors, project interns, communication and media analysts, and our practice advisory board.
